

## Liberty Fence is a better value than the competition

Liberty Fence is stronger than most competing products due to Jerith's exclusive HS-35 Alloy. By using our alloy with a reduced wall thickness, Liberty gives you a better value over imported and domestically produced fences without giving up strength. It's a win-win proposal!

The chart above shows how utilizing the HS-35 aluminum alloy gives Liberty more strength with less aluminum than the competition.

Take the pickets for example. The standard wall thickness of this component used by nearly every competitor is 0.050" compared to Liberty's 0.035" picket

wall. But the Liberty picket is actually 28% STRONGER than the competition. The reason is that virtually every other aluminum manufacturer extrudes their pickets using 6063-T5 aluminum alloy, but NOT Jerith.

So you will never need to worry about the strength and quality of an All-American-Made Liberty Fence by Jerith. They stand up to the competition in every category that counts. They are engineered to be strong and durable using a better aluminum alloy! After all, it's made by Jerith so you can count on the quality.

# Liberty Fence

Jerith created the first aluminum ornamental fences about 50 years ago. Back then, our sections were painted, guaranteed for fifteen years, screwed together, and held about a 200-pound load. For the next 25 years, all of our fences were made this way, which helped us establish our reputation for manufacturing durable, high-quality products.

We find that many customers today are looking for a proven, lower-cost, maintenance-free fence solution. Our Liberty Fence is designed with these buyers in mind. Using 5/8" square pickets and 1" x 1" rails, Liberty Fence recreates the performance of the original Jerith products with the same attention to detail and quality as our premium line of fences. Consider it "Classic Jerith"!

Liberty has two major improvements over our original fences. Our FencCoat™ finish is applied to Liberty Fences, which is the reason we can now give a Lifetime Warranty. Plus, our exclusive HS-35™ Aluminum Alloy gives our fence the strength of steel without the rust!

But the feature that truly sets Liberty apart from other low-cost aluminum fence options is that it is made entirely in the U.S. and is not imported. All fabrication, coating and assembly is done at our 444,000 square foot factory in Philadelphia, PA.

Liberty Fence is available in either a black or bronze finish in several different styles and heights (see chart on the left). So, if you want the proven quality, prestige, and performance of a Jerith fence, and you need a more cost-conscious choice, tell your contractor to "Give me Liberty!"

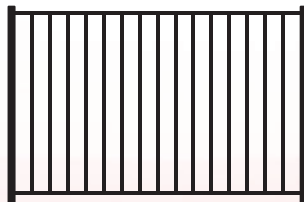

## AVAILABLE STYLES BY HEIGHT

FENCE HEIGHT	48"	54"	60"
Style 00	●	—	—
Style 11	●	—	●
Style 20	●	●	●
Style 22	●	●	●

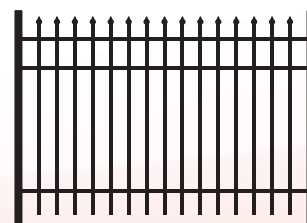

Note: 54" styles are modified so pickets do not extend below the bottom rail.
